

AVERAGE HUMAN LIFESPAN IN THE WORLD

1. Stress is probably one of the biggest problems in the contemporary world. It can significantly decide about the length of our existence.

Fill in the diagram with factors increasing and decreasing stress level

Despite high risk connected with childbirth, women have outlived men since at least XIV century, but the year 2006 will go down in history due to a special reason. It turned out that for the first time in history women lived longer than men in all countries in the world, even in the poorest ones. In what, therefore, does the mystery of women's longevity reside and what causes the fact that the weaker sex lives in good health till old age? The Internet can help you to answer the question.

2. Match given features of lifestyle influencing lifespan of women and men with pictures.

Share worries and advice more
 often hit the bottle more often
 like eating much and fat, they rarely go for diets
 don't care about fitness and watching their
 waistline bottle up bad emotions
 do periodic health examinations more often
