

Hi everyone!

My name is Adam Cserkuti. I was born on 06.07.1995 in Szombathely. My school is Jurisich Miklós secondary grammar school in Kőszeg. This school year is my third year in this school.

I have a lot of hobbies. I like dancing and I have danced for 13 years. I have been one of the best dancers of Hungary with my partner in 2005. Now we are in the category C, which means we have to do acrobatic elements (like in Dirty Dancing). I really like this kind of sport! If I was not able to dance, I would be miserable!

My other hobby is playing music. I used to play the horn, but because of my braces I have to play the tenor horn. I am the member of the city brass band. I really like this band because we play modern music, like Santana, jazz (Glenn Miller Story) etc. And also we play traditional brass music like marches.

I love motorbikes, so it is not so surprising, that I like riding a motorbike. When I was 14 years old, I started to get a driving licence. Since I had it I have been driving it a lot! We bought a Simson, an old German motorbike, which is a really cool trade. My cousin has one too, so we usually drive together and have trips in the mountains or in Austria. This summer we drove around Lake Balaton, which was a funny trip. Everybody who saw us waved at us! I will never forget driving around Lake Balaton.

I think I am a talkative and funny person. I really like co-operating with others, because I always need somebody, who I can talk to. Most of the people say after getting to know me: "I will never forget you!" I am a very ambitious and enthusiastic guy, so what I plan, I will do as soon as it is possible! I like coordinating for example a competition, and I think I have the skill to do this.

I have a dog, a beagle. Her name is Suzy. I really like her, because if I am sad she always cheers me up. I like having long walks with her.

I am really interested in science. My favourite subjects are Maths and Physics, and I want to be an architect, but I am not sure, if I really want it, or it is just a fictional plan of my subconscious.

What does isolation mean for me?

The first thing, which comes to my mind about isolation, is heat insulation. Today heat insulation is really important, because most of the families want to decrease their outlays. If they have an insulated house, they can save money, because less heat-energy will be wasted, so they have to pay less money for the heating. If we try to provide our house with heat-insulation, we have to find the best thermal-insulator. Today traders offer a wide range of thermal-insulators, but which is the best? It is really hard to decide, but we shouldn't forget that there is no way to provide something with heat-insulation perfectly, but we can approach it. We can find thermal-insulators made from different kinds of materials and chemical substances.

Last autumn I started to restore our attic with my father, and the first thing that we did was the thermal insulation. We had had 20 cm of heat-insulator, but it was not enough, so we put more 3 cm of polystyrene, which is a really good thermal-insulator. In my room, which is in the attic, there is no central heating, but I do not need it, because of the great heat insulation! In winter my room is quite warm, and because of the laws of the universe, the warm air ascends, so all of it blows into my room! In summer, my room cannot be heated by the summer radiation, so it can stay quite cool. I asked my parents to tell me if we can realize the affect of the heat insulation in the outlays, and they said yes! If we compare our bills from 2010 and from 2011, we can realise that we had to pay less in 2011 than in 2010. It can be because of the cool winter, but there were freezing weeks in February too. So heat insulation is really important today.

I am an environmental friendly person, so it is very important for me not to waste energy and money. How we usually say, I am "green", because I separate the junk. I and my family collect the newspapers to recycle them and the bottles to reuse them. So it is not so surprising, that I prefer heat-insulation. From my point of you, it is important to talk about.

There are other kinds of isolations such as isolation from the civilization, which is typical in the third world. Isolation can be found everywhere in the world. We can find it in our secondary grammar school too, like the students of the dormitory (students, and classes which have their classrooms in the dormitory) are isolated from the busy life of the school. Villages can be isolated from big cities.

Writing about isolation is a really hard task, but it can be useful to search.
