

Introduction

My name is Anna Király, and I live in Sárvár, Hungary, with my mother and my sister. My father works in England, so I see him very rarely. I'm 16 years old, and I'm attending the 10th grade at Jurisich Miklós Grammar school in Kőszeg, so I'm living in the dormitory. I'm enjoying it, and education is very good. I like many different things, for example sports, animals, sciences, music, and so on. I do two sports as hobby: orienteering and horse riding. I've ridden the horse for 10 years, and I love it very very much. When I have free time, I go to the riding school and have a good time with the horses and my friends. I've been doing orienteering for 7 years. On Fridays and at weekends I have orienteering-training, at weekends I go to races. I love it, because it makes me relaxed, and I can think about my problems during the running. And the forests are so beautiful, and I don't have to be on a diet, because I do this exhausting sport. And, of course, I do it in my spine corset, so it's more exhausting for me than for the other runners. I have a problem with my back. It's called scoliosis, and I have to wear a spine corset all the time. It is not very comfortable, and makes my life more difficult, I have to be tough to live an ordinary life with this strange, white something on my back. Sometimes I wish my corset disappeared, but never mind, it is the fact and I have to accept it. I have no choice. But my motto is: stay strong! I'm a very realistic girl. My favourite subjects at school are physics, chemistry, and maths. I only love things, in which there is logic, and sciences are things like this. What are my ambitions for the future? It's a very good question. I might go to university to study medicine, because I want to be a doctor, but I would have to work and learn very hard. Although it would be very difficult, I really want it, because I'm interested in medicine, and lots of my friends and relatives suffer from a disease, for example cancer, or AIDS, and I want to change. I want to discover the cure of these terrible diseases. And maybe get a Nobel-prize, or just be a hero. But it's still so difficult decision, what to learn, or what to become. And the worst thing is, that we have to decide right now, at the age of 16-18, because if we make a fault, a small mistake, our life will change, and not sure that in a better way. That's why I learn so hard and do my best. To achieve my goal, I must do it, and I think I am successful so far.

Isolation

What does isolation exactly mean? „It’s the process or fact of isolating or being isolated.” says the Internet. But i think it’s more. It’s the fault of our community, and the world. There are so many countries, which are isolated. They are in isolation, which means they are separately, and have not relationship with other people, other things, civilisation. They are poor, and not modern at all, meanwhile in the rich countries people make everyday another new mobile phone, children can’t imagine the life without Internet, and you can get anything for money. This world is unimaginable for people who live in the isolated or we can say developing countries. And their world is unimaginable for us! In the poor regions of Africa, people fight for food and many people die because of famine. They often sleep under the sky, they haven’t got any houses, or if they do, these houses are very old. And they can’t use medicine because there aren’t any. AIDS or other diseases destroy whole groups of people, societies.

People should improve education, health care and help the isolated countries with food, crimes, modern technology, give them computers or some money to improve themselves. They cannot develop if they don’t have the proper technology, or enough money. And it’s an infinite circulation: when a country develops, it gets money, and can develop, then gets more money, develops and gets more and more money etc... but when a country has no money, it can’t develop, and won’t get money. This situation is not the countries’ mistake. During the two world wars, they were colonies of big countries, so they were okay. But since they aren’t colonies, they’ve suffered, because the big empires took with them the money, food, technology, so poor people left there only. It is not okay. Unfortunately, there are some countries which are isolated because of their geographical location. They are on an island, which is far away from any other land, or they are behind a great mountain in a hidden area, so they have not relationship with the civilized states. They are very undeveloped, and have often very strange habits, traditions, and they live like us, many years ago.

There are also some problems with isolation between regions in a country. It’s sad, that a small part of a country can be in a worse situation than another part in the same country. It depends on money, and the leader, for example the prime minister. These regions are poor, people who live there aren’t happy, they don’t have enough food and so on. Their leader only deals with his own problems, and don’t want to help the whole region.

Of course, we don’t mean only countries or regions when we speak about isolation. There are some communities, that excommunicate a few people, and it is a very bad thing. These people suffer from being alone, and haven’t got many friends, so they get bored, and start doing stupid things. These people can become criminals, or get depression. That’s why so many neurotic people live in the world, also children. But there are some people, who want to be isolated, and don’t want to talk to other people, and don’t have relationship with the outside world. They were shocked by something, for example a crime, a murder, or a natural catastrophe, so they don’t want to be shocked again. They become crazy, and doctors can’t help them. So isolation is not a pleasant thing, even when we talk about only one person or a whole cou
