

Introduction

My name is **Péter Vadász**. I am 17 years old and I live in Hungary in a little town, (Kőszeg). I was born on 1st of October 1995. At the moment I am in my second year at secondary school. My favourite subjects are IT, Chemistry and History. I attend a special language class where we learn English 5 hours a week. We have a native teacher in English too. In the future I would like to carry on with my studies at a university and I would like to study IT. This is the reason why I am designing this homepage.

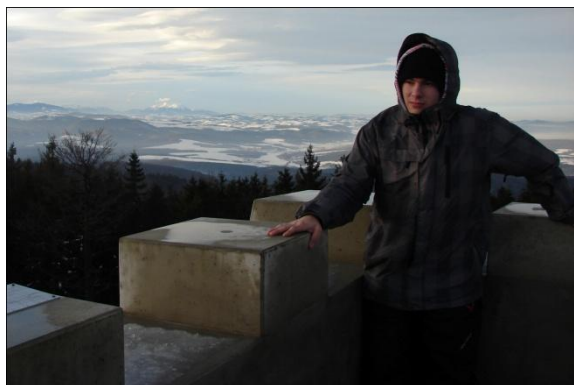

I do not have much free time because I have to study a lot. On the average I have not got more than 2 or 3 hours free a day. As I see it, hobbies are very important parts of our lives. Without them our lives would be too boring or monotonous. I think you can have more hobbies and also you can change hobbies during life. I think one of the cheapest and most simple way of entertaining at home is reading a book because to read a book you don't need any special equipment.

My hobby is taking photos. I like taking photos because if I take a picture I can steal a moment from life. I have got equipment like a tripod, flashes, and reflect panels. I have already got a prize for my picture. In our school there is a photo-circle as well:

www.jmgfotokor.blogspot.com

Some of my pictures are visible in the webpage of "The National Geographic Society".

I am also interested in computer programming. I've already designed some easier software.

For me, to live a healthy way of lifestyle you have to be aware of a very important thing: you should move regularly. I have tried several kinds of sports in my life. When I was eight, I started to swim. The next sport I took up was tennis. I was sure that this game would not be difficult, but it was. Now I like to go to cycling. It is very healthy and also it is a way of travelling. I usually travel 100 km a week by bike. Of course in winter I do not ride a bike.
